

## Index Data to become first ReShare Certified Service Provider

Boston, MA and Copenhagen, Denmark  
June, 2019

Project ReShare and Index Data are pleased to announce that Index Data will become the first Certified Service Provider for the ReShare consortial resource sharing platform. A software company specializing in creating innovative products and tools for the library ecosystem, Index Data will offer hosting, implementation, and support services for consortia that adopt the ReShare platform.

For the past year, Index Data along with academic, consortial, and commercial partners has engaged with Project ReShare, a groundbreaking effort to build a new, Open Source resource sharing platform for and by the library community. Initially focused on patron-initiated consortial borrowing, the ReShare partnership intends to develop the platform into all aspects of library resource sharing.

Sebastian Hammer, President of Index Data says, “Project ReShare is a strategic collaboration between important organizations in the library space, but more importantly, it is an unparalleled gathering of passionate and talented individuals. ReShare is a powerful example of what can be accomplished through open collaboration. At Index Data, we believe that open technology infrastructure is the essential substrate of a vibrant service ecosystem; one that fosters innovation and puts the patron in the center by eliminating roadblocks to interoperability. We participate in Project ReShare because collaboration is in our DNA as a team and because we firmly believe that we are at our best when we work together.”

As a ReShare Service Provider, Index Data will contribute technical and community resources to the project, as well as contributing financially to community activities. In the coming months, Index Data will work closely with the ReShare Steering Committee to develop open and transparent pricing models, negotiate caps on annual increases, and offer discounts to ReShare community members.

This partnership exemplifies the benefits of ReShare's community-ownership approach, which brings together libraries, consortia, software developers, and open source advocates to collaborate on a shared vision for library resource sharing. As a leading development partner for ReShare, Index Data has already made significant contributions of staff time and resources to the project and cultivated a deep expertise in its software, workflows, and user needs.

Index Data expects to go live with initial ReShare consortial customers in 2020.

## **Background**

Index Data has built solutions based on open source software since it was founded in 1994 and has created and released dozens of open source tools over the years. Its recent experience as lead development partner for the FOLIO project has led the company to develop a very strong perspective on the use of open source software as a means of building communities of intent, and for genuinely sharing ownership of technology across different kinds of organizations. The ReShare Community is a group of libraries, consortia, information organizations and developers, with both commercial and non-commercial interests, who came together in 2018 to create Project ReShare – a new and open approach to library resource sharing. The ReShare Community has a bold vision for building a user-centered, app-based, community-owned resource sharing platform for libraries to set the standard for how we connect library patrons to the resources and information they require.
